**Ideal for food products of all types, for example:**

- Mini Joints
- Meat and Sausage Products
- Game & Fowl
- Fish and Seafood
- Ready to Cook Meals

# SKINfoil™

## product features

- Aluminium foil smoothwall trays are ovenable, grill-able, and microwaveable
- Extends shelf life up to 10 days or even up to 30 days, depending on product and process
- Packaging minimisation – shallower tray can be used, as gas headspace is not required
- Holds product firmly in place
- Leak proof pack
- Product can protrude above rim of tray; suitable for mini-joints
- Can be used with ovenable absorbent pads, sauces, sauce sachets, garnishes
- Can be displayed vertically
- Can accommodate variable product shapes and sizes
- Bemis film can prevent freezer burn
- Film protects food content from transit damage (e.g. if bones are part of the product)
- Pack can be both 'skinned' and then 'top lidded' with a second film lid if required for labeling
- Skin film is easily peelable: if top film is also used, both can be peeled together
- Skin is transparent and barely noticeable. Can be labeled, or ideally band sleeved with adhesive 'watchstrap' band
- If optionally 'top lidded', a sauce sachet or promotional leaflet can be inserted between the skin film and top lid film

## benefits

- Offers complete cooking flexibility, and doesn't soften in the oven or under the grill
- Extended shelf life over two weekends reduces labour costs
- Extended shelf life reduces on shelf wastage
- Smaller pack reduces cost and carbon footprint
- Garnishes held in place improves 'eye appeal' and on shelf saleability
- Sauce sachets can be packed under the 'skin film', or added later if top lidding, so removing contamination risk from exudates
- Vertical presentation improves 'shelf fill', sales revenues

## exclusivity

- The SKINfoil™ solution is exclusively available in the UK and Ireland from Nicholl Food Packaging, Multivac UK, and Bemis UK
